

Avoid theft of your GPS-system today!

-  The GPS signal is not affected; there is full signal
-  Installation under 30 minutes
-  2 locks built/hidden in GPS-SAFE
-  No physical alterations to the GPS equipment itself, meaning that the warranty of the manufacturer is maintained 100%

GPS-SAFE is an innovative security solution that prevents GPS theft. This solution does not only save you time but it also ensures the safety of you and your employees during the installation/removal of GPS equipment by preventing fall from the machinery.

GPS-SAFE is developed in a way that thieves are not able to steal GPS equipment without using power tools, which would cause noise and attract unwanted attention - something a thief usually tries to avoid.

Do you want to secure yourself and your GPS equipment? Contact your local distributors or workshop and secure your GPS system today. If there is no GPS-SAFE solution available for your system, we will be happy to manufacture one for you.
